Re: Application for the position of [Position] — [Sector]

Dear Hiring Manager,

I am writing to express my keen interest in the [Position] role at [Company]. With **over 20 years of experience** in embedded software development, I am confident that my skills and background align closely with the requirements of this position. I am **ready to relocate** to [City] and open to **visa sponsorship**.

I specialize in **firmware, middleware and application layer development** — bare metal, RTOS-based (FreeRTOS, VxWorks) or Embedded Linux — building drivers and communication stacks (CAN, BLE, USB, TCP/IP) on ARM Cortex, STM32, Microchip and NXP architectures, within environments subject to stringent quality and certification requirements.

My career spans demanding industries that map directly onto the Gulf region’s strategic priorities: **aerospace and defense** at Safran, Thales and Zodiac (DO-178C, MISRA C), skills directly transferable to [Sector: e.g. EDGE Group defense programs / Thales ME aerospace]; **medical devices** at GE Healthcare and Sorin (IEC 62304); **IoT cybersecurity** at Enedis (Linky smart meter audits and pentesting), relevant for Smart City projects and critical infrastructure; **EV charging** at E2-CAD (ISO 15118, V2G), aligned with the region’s energy transition; and **payment terminals** at Cartadis, where 8 years gave me a solid foundation in full-stack embedded development. My code complies with MISRA C standards and my deliverables meet V-model traceability requirements.

What attracts me to [Company] is [reason: e.g. the scale of Vision 2030 megaprojects / your leadership in defense systems / NEOM’s Smart City innovation / the Gulf’s energy transition]. I am convinced that my experience in [relevant domain: e.g. DO-178 certified systems / secure IoT / industrial SCADA / EV charging] would bring significant value to your team. As a **native Arabic speaker**, trilingual in **French, English and Arabic**, I integrate naturally into the region’s professional environment.

Alongside my professional career, I founded **Workshop-DIY**, an educational robotics association where I lead workshops for young people on Arduino, ESP32, AI and 3D printing, reflecting my passion for knowledge sharing and innovation.

Available immediately and ready to begin relocation procedures, I would welcome the opportunity to discuss how my experience and expertise could contribute to your projects in greater detail.

Thank you for considering my application. I look forward to hearing from you.
